Aim

Assuring the health and safety of all children at Warradale Community Children's Centre is a team effort by the educators, family, and health care provider. This is particularly true when medication is necessary to the child's participation in childcare. Therefore, an understanding of each of our responsibilities, policies and procedures concerning medication administration is critical to meeting that goal, and to assure maximum safety in the giving of medication to the child who requires medication to be provided during the time the child is in childcare.

Implementation

- Whenever possible, it is best that medication be given at home. Dosing of medication can frequently be done so that the child receives medication prior to going to childcare, and again when returning home and/or at bedtime. The parent/guardian is encouraged to discuss this possibility with the child's health care provider.
- The first dose of any medication/medicated and non-medicated creams should always be given at home and with sufficient time before the child returns to childcare to observe the child's response to the medication given. Warradale Community Children's Centre requires that the child be on the medication for 24 hours before returning to childcare. This is for the protection of the child who is ill as well as the other children in childcare.
- Medication will only be given when ordered by the child's health care provider and with written consent of the child's parent/legal guardian.
- The child's parent/guardian must complete the **medication administration form within his/her room.**
- Any prescription or over-the-counter medication brought to the childcare centre must be specific to the child who is to receive the medication, in its original container, have a child resistant safety cap, and be labelled with a pharmacist label.
- All medications must be provided in an original pharmacy container and have a pharmacy label with:
Child's name,
name of the health care provider prescribing the medication,

Warradale Community Children's Centre acknowledges the traditional custodians of the land we live on today and we pay our respects to the Aboriginal and Torrens Strait Islander People past, present and emerging.

date of dispensing,
name of medication,
strength of medication dose (how much to give),
when the dose should be given, other administration instructions (eg to be taken with food), expiry date (where there is no expiry date the medication must have been dispensed within the last 6 months)
and any special instructions for its administration and/or storage.

- Medications given in the Centre will be administered by a staff member designated by the Centre Director and will have been informed of the child's health needs related to the medication and will have had training in the safe administration of medication. The dose will be checked by another staff member prior to the administration Both parties shall sign the **Medication administration form**.
- All medications will be stored so that they are inaccessible to children, under proper temperature control.
- Medication must only be administered to 1 child at a time and, where possible, should be administered in the same room where the medication is kept. Hand hygiene and standard infection prevention and control precautions should be adhered to prior to, during and after medication administration for each child.
- For the child who receives a particular medication on a long-term daily basis, the staff will advise the parent/guardian one week prior to the medication needing to be refilled so that needed doses of medication are not missed. Unused or expired medication will be returned to the parent/guardian when it is no longer needed or be able to be used by the child.
- Records of all medication given to a child are completed in ink and are signed by the staff designated to give the medication and the staff member who checked the dose. These records are maintained in the Centre. Parents need to sign for the medicine and see when it was last administered when they pick their child up from care.
- Information exchange between the parent/guardian and childcare provider about medication that a child is receiving should be shared when the child is brought to and picked-up from the Centre.
- Medication cannot be administered by staff if a **medication form** or label has been modified, overwritten or is illegible.

Warradale Community Children's Centre acknowledges the traditional custodians of the land we live on today and we pay our respects to the Aboriginal and Torrens Strait Islander People past, present and emerging.

- Parents/guardians should share with the staff any problems, observations, or suggestions that they may have in giving medication to their child at home, and likewise with the staff from the centre to the parent/guardian.
- Confidentiality related to medications and their administration will be safeguarded by the Director, Team Leader, and educators. Parents/guardians may request to see/review their child's medication records maintained at the Centre at any time.
- Parent/guardian will sign all necessary medication related forms that require their signature, and particularly in the case of the emergency contact form, will update the information as necessary to safeguard the health and safety of their child.
- Medicines requiring complex administration e.g.) including injecting (subcutaneous), administration via gastrostomy tube etc, the educators must have received proper training in how to administer this prior to the child commencing care.
- For children and young people with diabetes there will be times when they get hypoglycaemia (blood glucose levels too low). A hypo kit must be retained at the Centre and be readily available, either with the child or in the room. The hypo kit will contain items that will bring blood glucose level back up. This may include glucose tablets, jellybeans, non-diet soft drinks, muesli bars, dry crackers. These items are not a medicine.
- Paracetamol is not kept at the centre and will not be administered. Children who have been given paracetamol prior to attending the centre should remain at home as it only masks the symptoms.
- Medication such as epi-pens and asthma puffers will be kept in the child's room and expiry dates checked monthly when the first aid contents are checked.
- Staff are up to date with their First Aid training; giving staff the confidence to react appropriately in the event of a medical emergency- particularly from children in care with existing medical conditions.
- The Director must ensure that a copy of the medical conditions policy document is provided to the parent of a child enrolled at an education and care service if the provider is aware that the child has a specific health care need, allergy or other relevant medical condition. **(Note. A compliance direction may be issued for failure to comply with this regulation.**
